ALASKAN HUMUS:

What an amazing soil! We at AlphaWOLF Ranch in Napa Valley have used this soil in the planting of our grapevines and olive trees in 2000. We added 1 quart of humus to every plant during planting. To further test Alaskan Humus for root development, we planted 11 grape root stock with humus and 11 without. After 3 years we dug up some of the root stock and found a 25% increase in the roots of the plants where the humus was used. As a foliar feeder we make our compost tea with the humus which we apply to our vines and trees during the growing season. I have also used the humus in my vegetable and flower gardens and have experienced increased yields in both vegetables and flowers.

We highly recommend this product for all of your plantings.
